Ainsworth Inc. (GDI Ainsworth) — Mississauga, ON

Dear Hiring Manager,

I am writing to apply for the HVAC Apprentice (1st–5th Year) position with Ainsworth in Mississauga. I bring a gas-technician foundation, hands-on HVAC field experience, and an Electrical Engineering Technology diploma with Honours, and I am looking for exactly the kind of large, multi-trade union shop that can take on an apprentice and see them through the full program.

This past summer, in a co-op with Considerate Tech, I installed and pressure-tested gas piping from the meter through to appliance connections, sized and installed venting systems for gas-fired appliances, fabricated sheet metal ductwork from mechanical drawings, ran PVC intake and exhaust piping for high-efficiency units, and installed tankless water heaters through to commissioning — all on active residential construction sites alongside licensed technicians. Before that, as an HVAC Assistant, I installed and serviced residential and commercial HVAC systems, fabricated ductwork, cut and brazed copper, monitored refrigerant pressures, and supported preventive maintenance schedules. I also hold Gastite/FlashShield+ and WARDFlex CSST installer qualifications and an IPEX System 636 gas venting installer certification, so I am already comfortable working to the manufacturer specifications your service and installation work depends on.

I want to be direct about where I stand on the apprenticeship question: I hold my TSSA G3 certification and passed my G2 exam this September, but I am not yet registered in a formal Ontario HVAC/R (313A) apprenticeship. What I am looking for is an employer with the scale and trade depth to sponsor that registration, which is a large part of why Ainsworth stood out to me. I see this less as a gap and more as timing — I have already proven I can pass the TSSA exams and perform the field work, and I am ready to commit to the full apprenticeship term with an employer willing to sponsor me into it.

I hold a full G driver's licence, have my own vehicle, and can start promptly. Thank you for considering my application — I would welcome the opportunity to discuss how my gas, HVAC, and electrical background could contribute to your team.

Sincerely,

Simmon Yang
