MEP Services Group — East York, ON

Dear Hiring Manager,

I am writing to apply for the Refrigeration and Mechanical Technician position posted on Job Bank. I am a TSSA-certified G3 Gas Technician with my G2 certification exam scheduled for September 11, 2026. I hold Working at Heights and WHMIS certification, a clean G-class licence, and my own hand tools. I am looking to build my career on the refrigeration and HVAC side, and the range of systems in this role — rooftop units, split systems, heat pumps, and ventilation — is exactly the work I want to be doing.

My hands-on experience combines gas and HVAC. This past summer I worked full-time in new residential construction: installing and pressure-testing gas piping from the meter through to appliance connections, sizing and installing venting for gas-fired appliances, running PVC intake and exhaust for high-efficiency units, and connecting tankless water heaters through to commissioning. Before that I worked as an HVAC assistant on residential and commercial systems — ductwork fabrication, copper brazing, refrigerant checks, leak testing, and troubleshooting from wiring diagrams. I am comfortable reading blueprints and laying out reference points for installation.

My background is also electrical: I graduated with Honours from Centennial College's Electrical Engineering Technology program, with coursework in control wiring, instrumentation, and drawing interpretation. On a service call that means I can read a schematic, meter a circuit, and diagnose a control or ignition fault rather than only replace parts.

I am early in my trade hours, but the combination of gas certification, HVAC fieldwork, and an electrical engineering foundation means I can contribute quickly and keep learning fast. I am available for early-morning, shift, and on-call work and can start on short notice. I would welcome the chance to discuss how I can contribute to MEP Services Group.

Sincerely,

Simmon Yang
