Quality Breeze Home Service — Scarborough, ON

Dear Hiring Manager,

I am writing to apply for the Gas Fitter position posted on Job Bank. I am a TSSA-certified G3 Gas Technician with my G2 certification exam scheduled for September 11, 2026, and I have just finished a summer of full-time gas work in new residential construction. I am looking to move into residential service, and Quality Breeze's home-service focus is exactly the direction I want to grow in.

During my co-op with Considerate Tech this summer I installed and pressure-tested gas piping from the meter through to appliance connections, sized and installed venting for gas-fired appliances, ran PVC intake and exhaust for high-efficiency units, and connected tankless water heaters through to commissioning. Before that I worked as an HVAC assistant on residential and commercial systems — ductwork fabrication, copper brazing, refrigerant checks, and troubleshooting from wiring diagrams. I hold WHMIS and Working at Heights certification, have a clean G-class licence, and own my hand tools.

My background is also electrical: I graduated with Honours from Centennial College's Electrical Engineering Technology program, with coursework in control wiring, instrumentation, and drawing interpretation. On a service call that means I can read a schematic, meter a circuit, and diagnose an ignition or gas-valve fault rather than simply swap parts.

I am reliable, available for shift and on-call work, and can start on short notice. I would welcome the chance to discuss how I can contribute to your team.

Sincerely,

Simmon Yang
